To Whom It May Concern,

Located on a 15-acre property on the southern outskirts of Perth, Touchwood Nursery employs over 20 dedicated staff and has long been a trusted name in the industry. While the nursery landscape has evolved, our commitment to excellence and environmental stewardship has remained constant.

In January 2024, we took a significant step toward sustainable water management by installing a 100mm President Water Vortex Generator.

Our licence is for 89,000,000 litres per year, which we use or go over slightly. Over the past 12 months, this innovative system has saved us an extraordinary **15,000,000 litres** (16.85%) of water. This achievement has not only reduced our environmental footprint but also ensured we continue delivering vibrant, healthy plants to our customers. By embracing cutting-edge technology, we've strengthened our operations while contributing to a more sustainable future.

At Touchwood Nursery, we believe that responsible practices are key to long-term success. Our water-saving efforts reflect our broader commitment to innovation, quality, and environmental care—values we strive to share with our community, customers, and industry partners.

Sincerely,

Ben Archibald  
Founder, Touchwood Nursery
